

Vinva Global Equity Fund

APIR: MGE9I79AU | ARSN: 681 299 730

To Australian wholesale and retail investors

QUARTERLY REPORT

30 JUNE 2026

INVESTMENT STRATEGY

The Fund invests substantially all of its assets in the Vinva International Equity Fund, (the “**Underlying Fund**”), which is a registered managed investment scheme managed by Vinva Investment Management Limited. The Underlying Fund, invests substantially all of its assets in global listed securities (or derivatives that provide exposure to global listed securities or indices).

OBJECTIVE

The Fund aims to outperform the MSCI All Country World ex Australia ex Tobacco ex Controversial Weapons Index (AUD) with net dividends reinvested, after the Responsible Entity's fees, over periods of three years or longer.

INVESTMENT APPROACH

Vinva uses an active systematic investment approach which harvests returns from global listed companies using a disciplined and repeatable process. The Underlying Fund's portfolio will typically comprise over 400 investments and is managed to be style neutral and therefore not expected to be materially correlated to a single company, country, industry specific or macroeconomic risks.

INVESTMENT RISKS

All investments carry risk, returns are not guaranteed and there is a risk that investors may lose money on any investment they make. The Fund's Product Disclosure Statement (**PDS**) sets out the significant risks relevant to the Fund. You can view the PDS at www.magellaninvestmentpartners.com

MARKET REVIEW

Global equities delivered an exceptional quarter, with the MSCI World Index returning +14.0% in local currency terms and the MSCI ACWI returning +15.1% as investors looked through elevated inflation and geopolitical uncertainty to embrace a powerful AI-driven earnings cycle. US markets led the early charge, with the S&P 500 surging approximately 10.5% in April alone as risk appetite rebounded sharply from March's war-related sell-off before extending gains into May on the back of strong technology earnings. The macro backdrop, however, remained challenging. Core PCE edged up to 3.4% year-on-year in May, driven by firmer services inflation, while headline CPI accelerated to 4.2% year-on-year, its third consecutive monthly increase as energy prices surged on Middle East supply disruptions through the Strait of Hormuz. Non-farm payrolls remained resilient, adding 172,000 jobs in May with the unemployment rate steady at 4.3%. Against this backdrop, the June FOMC meeting, the first chaired by Kevin Warsh, held the federal funds rate at 3.50%-3.75% but delivered a hawkish reset: forward guidance was stripped from a dramatically shorter policy statement, and the dot plot shifted to a median year-end rate of 3.8%, with nine of eighteen participants pencilling in at least one hike. Markets repriced accordingly, with US equities lagging the rest of the world in June even as the quarter's overall returns remained exceptional.

European equities posted solid gains over the quarter, supported by the broader global risk-on tone, though the region faced a more difficult fundamental backdrop than its peers. Eurozone inflation climbed to 3.2% in May, its highest since September 2023, driven by energy costs rising 10.8% year-on-year as Middle East tensions disrupted supply. The ECB responded by raising its three key interest rates by 25 basis points at its June meeting, lifting the deposit facility rate to 2.25%, its first rate increase since September 2023, citing persistent energy-driven inflation and the risk of second-round effects. Growth remained subdued, with Eurozone GDP expanding just 0.2% quarter-on-quarter in Q1 2026 as the energy shock weighed on real incomes and confidence. By June, headline inflation had eased to 2.8% as oil prices retreated following a US-Iran framework agreement, offering some relief to the outlook.

The Asia-Pacific region was the standout of the quarter, with the MSCI Emerging Markets Index returning +24.1% in local currency terms, powered by extraordinary gains in Korea and Taiwan as the AI memory-chip cycle drove semiconductor valuations sharply higher. Japan also performed strongly: the Bank of Japan held rates steady at 0.75% in April amid Middle East uncertainty before raising the policy rate to 1.0% at its June meeting, signalling a continued tightening bias as underlying inflation approached the 2% target. Japan's Q1 GDP growth beat expectations, supporting equity gains through

the period. In China, the picture was steadier but softer; the Caixin Manufacturing PMI remained in expansion territory above 50 throughout the quarter, supported by AI and green-tech demand, although domestic consumption indicators remained weak and growth was tracking towards the mid-4% range for 2026.

FUND REVIEW

The Fund had a negative alpha quarter, underperforming the benchmark by 0.6% (net of fees). As the Fund invests the bulk of its assets in the Vinva International Equity Fund (Underlying Fund), the commentary below is provided in relation to the investments held by the Underlying Fund.

Global linkages, sentiment and behavioural signals were the main detractors from alpha over the quarter, offset marginally by valuation signals. Stock-specific performance was positive during the quarter.

The biggest stock contributors to performance included overweight positions in SK Hynix (+72bps) and Fortinet (+25bps). The overweight position in SK Hynix is driven by a combination of behavioural, segmentation and value signals. The overweight position in Fortinet is driven primarily by our quality signals.

An underweight position in Intel (-33bps) detracted from performance during the quarter. The underweight position in Intel is driven in part by our quality and value signals.

Stock contributors/detractors are based in local currency terms unless stated otherwise.
