# Exchange Traded Funds

Exchange Traded Funds (ETFs) are a simple way for investors to gain access to a wide range of asset classes. They are open-ended funds whose units trade on the Australian Securities Exchange (ASX), just like an ordinary listed security. They enable investors to gain access to portfolio of shares in one easy transaction – either online or through a stockbroker.

**Passive ETFs** have existed since 1993 when State Street launched the SPDR S&P 500 ETF in the US. Passive ETFs typically track an index (such as the S&P 500 index) and the portfolio is updated regularly (generally quarterly) to reflect changes in the reference index.

**Active ETFs**, where an investment manager is actively managing a portfolio of securities, have existed globally for some time. However, there have been few choices available to investors as investment managers have been reluctant to publish their portfolios daily. In Australia, Active ETF issuance started to evolve in early 2015 when issuers and regulators agreed on a portfolio disclosure regime that balanced the needs of investors who want to know what they're investing in with the protection of the investment manager's intellectual property (its portfolio holdings and active portfolio decisions).

Structurally, Passive ETFs and Active ETFs are similar, but they also have some differences that are important for investors to understand.

## What are the similarities?

### Structure

In Australia, both Passive and Active ETFs are generally registered managed investment schemes, a type of 'unit trust', that trades on the ASX in the same way that a share in a company trades on ASX. Like any share or unit traded on the ASX, investors can buy or sell units in the ETF from each other on the ASX.

### Transparency

Investors have transparency as to the value of the underlying fund and the composition of its portfolio through regular disclosure provided on the ASX and the ETF issuer's website. The value of the ETF's underlying investments is generally provided in the form of the net asset value per unit and an indicative intraday net asset value (iNAV) per unit, which generally updates throughout the ASX trading day. The level of portfolio disclosure will generally depend on whether the ETF is a Passive ETF or an Active ETF and, in the case of the latter, what has been agreed with the ASX. Passive ETFs will either provide an iNAV per unit and/or the full portfolio comprising names and weights of the investments as well as monthly fund fact sheets. Active ETFs will generally provide daily net asset value and iNAV per unit, monthly fund fact sheets and a full portfolio comprising names and weights of the investments on either a monthly or quarterly basis.

### Liquidity

To ensure there is efficient trading in the secondary market of ETF units and with the objective of having the trading price track the underlying net asset value, ETF issuers put in place additional liquidity arrangements. As ETFs are open-ended funds and can continuously issue and redeem units, they are able to facilitate these liquidity arrangements.

Passive ETFs issuers largely outsource the provision of liquidity to third-party market makers such as investment banks. Market makers trade an inventory of units on ASX and are able to apply or redeem with the ETF to settle their net trading position. These market makers form their own view of the net asset value of the ETF and provide bids and offers in the market around that value, within the bounds of their own balance sheet risk appetite for providing this liquidity.

Active ETF issuers either follow the same market making model as Passive ETFs or opt to have the ETF provide the liquidity. This means that the ETF might, at any time, be providing bids and offers in the market around the issuer's assessed value of the units at that time.

### Taxation

Being unit trusts, both Passive and Active ETFs allow a full passthrough of income such as dividends, franking credits, capital gains and discounted capital gains income, and provide investors with the ability to manage their own tax affairs.

## What are the differences?

### Type of investments

With an **Active ETF**, a portfolio manager will undertake stock research to determine which underlying securities or stocks to hold and in what percentages. They will then actively manage weightings of the stocks depending on stock valuations, industry trends and views on macroeconomics. They can also hold cash to manage the overall risk of the portfolio and also to take advantage of opportunities when markets move.

A **Passive ETF** tracks an index. This can be over a broad-based stock market index, a sector index, custom-built indices or indices comprising fixed income, credit, commodities and currency. They can either fully replicate an index by buying all the securities that make up the index or they can be optimised by buying the securities in an index that provides the most representative sample of the index based on correlations, exposure and risk.

**Physical ETFs** attempt to track their target indices by holding all, or a representative sample, of the underlying securities that make up the index whereas Synthetic ETFs rely on derivatives such as swaps to execute their investment strategy instead of physically holding each of the securities in an index.

## How do fund structures compare on the ASX?

Listed Investment Company (LIC)	Listed Investment Trust (LIT)	Active ETF	Passive ETF
Company	Trust		
Income after 30% tax	Full pass through of income - taxed at investor's Marginal Tax Rate		
Monthly NAV	Intraday iNAV		
Closed ended	Open ended		
Investors trade with each other	Investors trade with each other and market makers may provide additional liquidity		
Can trade at a premium or a discount to NAV	Generally, trades very close to NAV		
Active management	Passive management		
Can hold a variety of assets including cash	Replicates an index		

## How many ETFs are available on the ASX?

As at the end of March 2023, there were 285 Active and Passive ETFs available on the ASX with over \$138 billion\* in market capitalisation.

## How do I access ETFs?

You can access both Passive and Active ETFs on the ASX via your online share trading account or through your stockbroker. You will need to know the ASX code that relates to the ETF.
